## > High quality, even without a fee

Mailware is built with mature and stable Open Source software, carefully designed to ensure maximum reliability. By choosing Open Source, you'll have, without paying an annual fee, a product that you can get to know in its every component, that you can manage and customize freely, without additional costs.

The transition to Mailware is simple, the platform is compatible with all the applications you already use. By interfacing with the mail server, calendaring and synchronization, it does not create lock-in or use proprietary APIs: all the communication takes place using open, secure and consolidated protocols such as CalDAV and SyncML.

## > All the features you need

The Mailware platform has all the functions needed for enterprise collaboration. For simple e-mail services choose the Basic package; the Collaboration package also contains Calendar, Chat and the possibility of sharing the address book. ISP allows you to manage multiple Companies, while Full contains all the features of other packages.

You can further customize Mailware with useful optionals such as Giga Message, to easily exchange email with large attachments or PEC, to give legal value to e-mails sent and received.

## > Easy e-mail, wherever you are

Mailware is compatible with all commonly used Messaging & Collaboration software such as Outlook or Mozilla Thunderbird. If you do not have access to your computer, try the web interface, accessible through any browser, feature-rich and easy to use. Here you can create labels to organize your conversations, move messages from one folder to another with a simple drag and drop, sort the messages or search by tag or interval of time: managing your e-mail has never been so easy.

From your Smartphone, PDA or mobile phone, you can continue working as if you were at the office. Receive and send e-mail, organize meetings in the Calendar or use your address book, everything will be perfectly synchronized with your computer.

## > Working together with simplicity

With Mailware Calendar you only need one click to create an event and share it with your colleagues. If your message cannot wait, use the chat to talk or send files. Mailware allows you to share your mail folders and even your Address Book, helping you to work together simply and efficiently.

If the amount of data exchanged via e-mail is your constant problem, opt for the e-mail box with unlimited space. This way your messages and documents will always be easily accessible to you and your team.

## > How can we help you?

If you already have the necessary knowledge or want to acquire it, you can download Mailware Community for free and manage the platform independently. For any technical difficulties, our team will be at your disposal for assistance or training programs.

For a more complete support, you can request consulting, migration and design services or the implementation of the whole structure.
